PROFESSIONAL SUMMARY

Junior Software Engineer at Amigo Softcom LLP building and maintaining a multi-tenant payroll, attendance, and recruitment platform with role-based access control, used daily by 60+ employees across multiple organizations. Work end-to-end across responsive React.js/Next.js web frontends, Node.js and Elixir/Phoenix REST APIs, PostgreSQL data models, and AI/LLM-powered features - owning work from design through deployment on self-managed Linux servers.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), TypeScript, Java, Elixir
- Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS
- Backend: Node.js, Express.js, Elixir/Phoenix, REST APIs, JWT authentication, role-based access control
- Databases: MongoDB (Mongoose), PostgreSQL
- AI / LLM Integration: Anthropic Claude API, Google Gemini API, OCR-based document parsing
- Tools & Platforms: Git, GitHub, Postman, Linux (Ubuntu), Nginx, Netlify, Render, Cloudinary, Twilio
- Practices: Agile development across the full SDLC, Git/GitHub pull-request reviews, Data Structures & Algorithms, OOP

WORK EXPERIENCE

Junior Software Engineer | Amigo Softcom LLP

Apr 2026 - Present | Gurugram / Noida, India

- Build and maintain a multi-organization payroll, attendance, and recruitment platform used daily by 60+ employees, owning features end-to-end across React.js/Next.js frontends and Node.js and Elixir/Phoenix REST APIs.
- Develop payroll computation logic including a default-to-worked salary formula, per-day shift overrides, and role- and department-specific attendance cutoffs.
- Build attendance workflows - daily check-in/check-out, scheduled morning and evening attendance snapshots, leave management with reminders, and automated PDF payroll and attendance reports.
- Implement JWT authentication and role-based access control for owners, HR, and on-site kiosk staff, including an admin capability to log in as a selected organization.
- Deploy and operate the platform on self-managed Linux (Ubuntu) servers with Nginx and PostgreSQL across staging and production, shipping frequent releases via Git and GitHub pull requests.

Full Stack Developer Trainee | Engibiz Multiple Solution Pvt. Ltd.

Oct 2025 - Mar 2026 | India

- Completed a six-month full stack (MERN) development training program, building and deploying web applications with React.js, Redux Toolkit, Tailwind CSS, Node.js, Express.js, and MongoDB.
- Built DevTinder, a full-stack MERN matchmaking platform, as the capstone project (detailed under Projects), and strengthened JavaScript, REST APIs, authentication, and Data Structures & Algorithms through hands-on projects and code reviews.

PROJECTS

Payroll, Attendance & Recruitment Management System

Amigo Softcom LLP • [Live Web](#) • [Google Play](#)

- Built core payroll and attendance features - shift scheduling with per-day overrides, leave tracking with automated reminders, check-in/check-out, and daily attendance snapshot reports - used daily by 60+ employees, replacing a manual register-based process.
- Developed the web-based kiosk mode for on-site staff attendance, with Twilio SMS notifications and scheduled jobs for automated payroll and leave reminders.

- Added an integrated, toggle-enabled AI-powered Applicant Tracking System (ATS) module with a resume-parsing autofill pipeline using Anthropic Claude and Google Gemini APIs and OCR, cutting manual data entry per application by around 80%.
- Implemented a public, no-login job application flow, candidate management interface, and manual employee registration on a Next.js frontend with REST APIs.
- Designed a multi-tenant architecture with per-organization data isolation and role-based access control (owner, admin, HR, manager, and employee roles) enforced on every API request.
- Generated downloadable PDF payroll and attendance reports for HR, with scheduled morning and evening attendance snapshots.

DevTinder - Developer Matchmaking Platform (MERN)

Personal project, 2025 • [Live Demo](#) • [Code](#)

- Built a full-stack developer matchmaking platform where developers create profiles, swipe to connect, and accept or reject connection requests.
- Implemented JWT authentication and authorization, Cloudinary-backed profile image uploads, and a dashboard of connections and pending requests.
- Frontend with React.js, Redux Toolkit, and Tailwind CSS; backend with Node.js, Express.js, and MongoDB (Mongoose); deployed on Netlify and Render.

EDUCATION

B.Tech in Computer Science - CGPA: 7.6/10

2020 - 2024 | Dr. A.P.J. Abdul Kalam Technical University, Lucknow, India

CERTIFICATIONS

- Namaste React (React.js) - Akshay Saini, 2024
- Namaste Node (Node.js) - Akshay Saini, 2024
- Full Stack Web Development - Apna College (Shradha Khapra), 2023
